

# Contract Lifecycle Management

Manage the entire contract lifecycle, from creation and approval to archiving, in a structured, transparent, and audit-proof manner.

Centralized, structured contract data

Template-driven governance

Permission & lifecycle controls

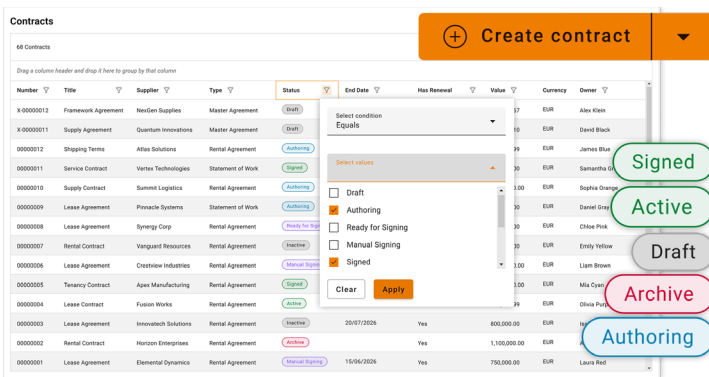

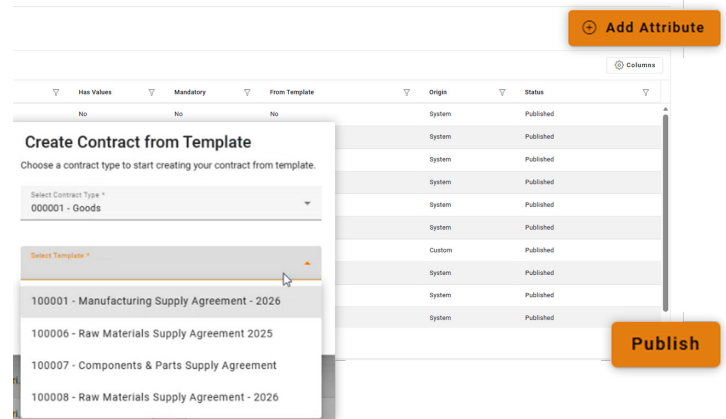

Versioning, authoring controls, and auditability

Interactive dashboards and operational visibility

## Contract Creation with Templates

Contracts are created based on predefined templates with clearly defined content, mandatory fields, and basic structures from the outset. This ensures uniform contract standards and reduces coordination effort during creation.

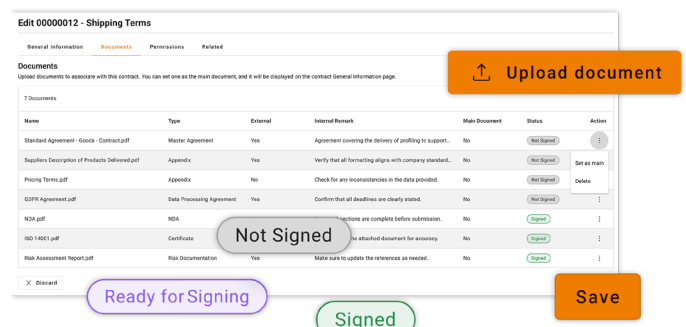

## Central Contract Repository

Once created, contracts are managed centrally in a powerful repository that provides a unified view of both active and archived (legacy) contracts. Enterprise-grade filtering, grouping, and configurable columns enable teams to quickly find, organize, and analyze contracts across large volumes to maintain clear oversight of content, status, and responsibilities.

## Versions & Editing

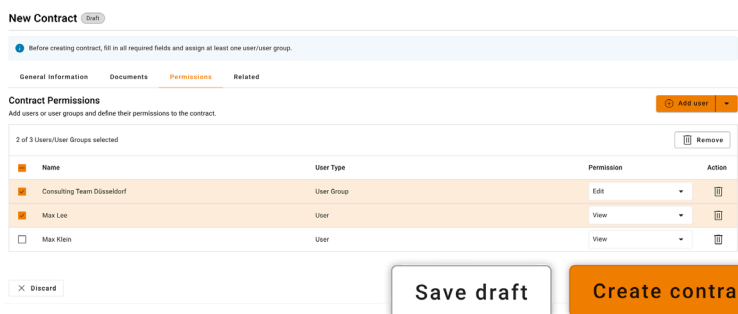

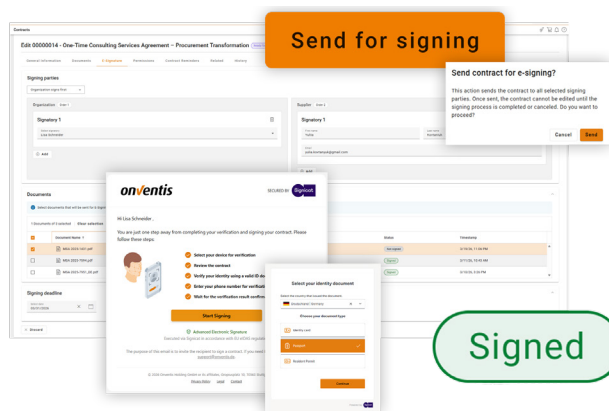

Every change to the contract is versioned and transparently documented with clear controls that prevent parallel editing conflicts. This ensures full visibility of what has been changed and by whom.

# Contract Lifecycle Management

## Integrated E-Signatures

Finalize contracts digitally with eIDAS-compliant Advanced Electronic Signatures (AES) by default. With centralized contract data, versioning controls, and structured workflows, e-signing eliminates reduces process times and ensures complete transparency from creation to signature.

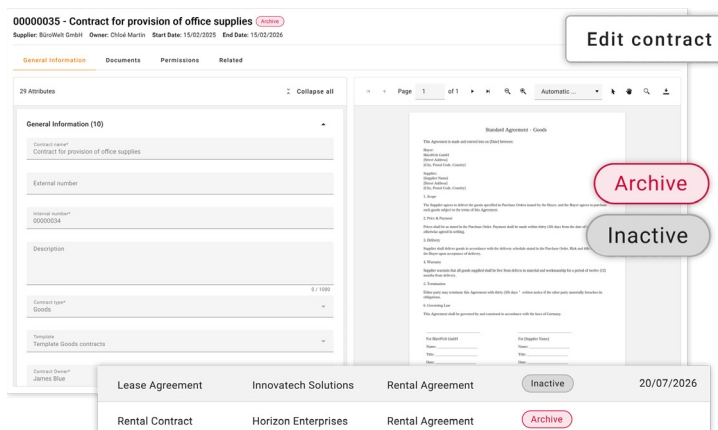

## Controlled Contract Lifecycle

Contracts go through defined phases; the current status is visible at all times, making progress transparent to all parties involved. This creates clear handovers, unambiguous responsibilities, and reliable processes.

## Archiving & Traceability

Audit announced? Onventis CLM archives completed contracts in an audit-proof manner and keeps all content, versions, and status changes traceable and available at all times, even years later.

## Overviews for Decision-Making

Contract Lifecycle Management creates transparency across all contracts. Centralized data and clear structures to identify developments at an early stage and make informed decisions.

## Clear Processes, Less Effort

Structured workflows and controlled changes ensure secure contract processes. Information remains complete, up-to-date, and traceable with minimal manual effort.

## Ready for Growth

With uniform standards and scalable structures, Onventis CLM supports increasing contract volumes while ensuring reliability and compliance.
